

## ABSTRACT

The invention relates to a storage medium on which a set of data is stored such that at least part of the set of data can be read and processed using a evaluation device, one part of the set of data being stored in a read-only memory area and another part of the set of data being stored in a read/write memory area of the storage medium. At least part of the set of data is read by means of the evaluation device and can be processed in a first processing form and at least one other processing form, each of which can be selected by means of the evaluation device, independent data in the set of data, which independent data can be used both for the at least partial processing of the set of data in the first processing form and for the at least partial processing of the set of data in the at least one other processing form, being included in the first part of the set of data, which part is stored in the read-only memory area.
